

Non-financial Affiliates of the Dongbu Group

Steel, New Materials and Electronics

Dongbu Steel operates steelworks at Asan Bay, Incheon and Pohang, turning out a combined 2.5 million tons of steel sheet, pipe, beams, wire and bars per year. A fully-automated facility at Asan Bay provides world-leading cost competitiveness for surface treated steel. The company has also developed a production process for polycrystalline silicon, used to make semiconductors.

DongbuAnam Semiconductor, a merger of Dongbu Electronics and Anam Semiconductor, is the world's fourth largest contract chipmaker. The company processes the latest system-on-a-chip devices, embedded memory chips, and CMOS image sensors for some of the world's foremost semiconductor makers.

Biotechnology and Chemicals

Dongbu Hannong Chemicals is Korea's leading agrochemical producer, with a product portfolio that includes fertilizers, seed, veterinary medicines, oils, emulsifiers, and alloy steels. The company is also applying technologies acquired over more than half a century to break into new fields such as bio-engineering.

Dongbu Fine Chemicals produces specialty chemicals and materials for electronic applications. Products include over 60 agrochemicals, as well as adhesives and magnetic powder cores. Company research activities are also expanding into polymers, bulk pharmaceuticals and high-purity chemicals for electronics.

Construction and Transportation

Dongbu Corporation was one of Korea's first companies to enter the Middle Eastern construction market. The company is equipped to carry out a wide range of construction projects, including apartment complexes, parking garages, steel structures and environmental protection facilities.

Dongbu Engineering offers comprehensive consulting services in support of the construction industry.
